

VisibilityOS

AI Recommendation Visibility Platform — Project Overview

Confidential · Internal share · 21 September 2026 · With feature snapshots

Purpose

VisibilityOS helps B2B software teams see how AI assistants — ChatGPT, Claude, Gemini, Perplexity, and a customer-connected AI API — describe their brand versus named competitors. Monitor mentions and recommendations, diagnose gaps, and prove impact over time.

What has been built

Full-stack application: 10-screen SPA live at visibilityos.ensarresearch.com, plus backend for auth, workspaces, mock scans, metrics, recommendations, experiments, confidence scoring, and a free public grader.

Area	Delivered
Product UI	10 screens: setup → monitoring → action → proof → billing
Backend	FastAPI auth, prompts, mock scan/parse/rollup, dashboard & confidence APIs
Enhancements	Live/demo dual mode, workspace API wiring, free grader, phase specs 003–010

Architecture

FE: React 18 · Vite · TypeScript · shadcn/ui · TanStack Query | **BE:** Python 3.12 · FastAPI · Postgres 16 (RLS) · Redis · Celery

Data path: scan → parse → metric_daily → composite APIs | **Deploy:** CloudFront + S3 (SPA live); ECS/RDS planned

Status

- **Ready:** local full stack + offline demo UI. Demo: demo@northstar.dev / VisibilityOS-Demo-2026!
- **Open:** FR-012 scan commitment; pricing lane (\$2k–\$15k vs \$99–\$299).
- **Next:** live LLM provider adapters, OAuth, Stripe, S3 raw capture.

Feature snapshots — entry & core analytics

Sign-in

Authentication entry and product value proposition

Workspace setup

Brand, competitors, regions, monitoring cadence

Visibility Dashboard

KPIs, share of voice over time, alerts

Model Monitoring

Per-model health, inclusion trends, run scans

Feature snapshots — prompts, answers & competition

Prompt Library

Tracked buyer prompts, schedules, and templates

Answer Analysis

Model replies with citations, position, sentiment

Competitor Intelligence

Share of voice, root causes, battlecards

Content Recommendations

Prioritized actions with predicted impact

Feature snapshots — proof, commercial & GTM

Experiments & Impact

Before/after visibility lift from content changes

Reports & Billing

Plans, usage limits, team access, compliance panel

Free Visibility Grader (GTM enhancement)

The screenshot shows a 'FREE DIAGNOSTIC' form titled 'AI Visibility Grader'. The form asks for a 'Brand name' (Northstar) and 'Competitors (comma-separated)' (Kong, Postman). A 'Get visibility score' button is at the bottom. Below the button, it says 'Sign in for continuous monitoring'.

Public no-login diagnostic at /grader — lead-magnet style enhancement for top-of-funnel acquisition

Enhancement highlights

- Complete 10-screen analytics product with consistent navigation and demo workspace.
- Backend vertical slice: auth → workspace → prompt → mock scan → metrics → dashboard.
- Action & proof layer: recommendations queue + experiments for measurable lift.
- GTM: free grader; confidence utilities for sample-size honesty.
- Roadmap specs for phases 003–010 (coverage, confidence, absorption, revenue, causal lab).
